Bracket Expansion · Double Brackets

ALG-3E2E-L2 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S1

$(x-1)(x+1)$

Answer:

x^2-1

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Use FOIL.

$x^2+x-x-1$

x^2-1

Step 3: Collect any like terms and write the expression in expanded form.

S2

$(3x-1)(x-4)$

Answer:

$3x^2-13x+4$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Use FOIL and combine like terms.

$3x^2-12x-x+4$

$3x^2-13x+4$

Step 3: Collect any like terms and write the expression in expanded form.

S3

$(2x+4)(3x+3)$

Answer:

$6x^2+18x+12$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply each term in the first bracket by each term in the second bracket.

$6x^2+6x+12x+12$

$6x^2+18x+12$

Step 3: Collect any like terms and write the expression in expanded form.

Bracket Expansion · Double Brackets

ALG-3E2E-L2 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S4

$(3x-1)(3x+1)$

Answer:

$9x^2-1$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply each term in the first bracket by each term in the second bracket.

$9x^2+3x-3x-1$

$9x^2-1$

Step 3: Collect any like terms and write the expression in expanded form.

E1

$(x-1)(x-4)$

Answer:

x^2-5x+4

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Use FOIL.

$x^2-4x-x+4$

x^2-5x+4

Step 3: Collect any like terms and write the expression in expanded form.

E2

$(2x-2)(x+4)$

Answer:

$2x^2+6x-8$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Use FOIL and combine like terms.

$2x^2+8x-2x-8$

$2x^2+6x-8$

Step 3: Collect any like terms and write the expression in expanded form.

Bracket Expansion · Double Brackets

ALG-3E2E-L2 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

E3

$(2x + 4)(3x - 4)$

Answer:

$6x^2 + 4x - 16$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply each term in the first bracket by each term in the second bracket.

$6x^2 - 8x + 12x - 16$

$6x^2 + 4x - 16$

Step 3: Collect any like terms and write the expression in expanded form.
