S1

Compare unit prices to decide the better value.

Shop A sells 5 batteries for £2.10. Shop B sells 9 batteries for £3.06. Which shop is better value?

S2

Apply the changes in the order stated in the question.

An item costs £55.00. It is reduced by 25%, then 5% VAT is added to the reduced price. Find the final price.

S3

Use the given exchange rate to convert currencies.

The exchange rate is £1.00 = EUR 1.18. Convert £60.00 to euros.

S4

Compare unit prices to decide the better value.

Shop A sells 10 pens for £9.00. Shop B sells 15 pens for £15.60. Which shop is better value?

Teacher answers & working

Financial Real-Life Maths · Everyday Money

NUM-C0D6-L1 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S1

Compare unit prices to decide the better value.

Shop A sells 5 batteries for £2.10. Shop B sells 9 batteries for £3.06. Which shop is better value?

Answer:

Shop B, saving 8.00p per battery

Working:

Find the unit price for Shop A.

Shop A unit price = £2.10 ÷ 5 = 42.00p per battery.

Find the unit price for Shop B.

Shop B unit price = £3.06 ÷ 9 = 34.00p per battery.

Compare the unit prices: 34.00p is less than 42.00p.

Shop B is better value by 8.00p per battery.

S2

Apply the changes in the order stated in the question.

An item costs £55.00. It is reduced by 25%, then 5% VAT is added to the reduced price. Find the final price.

Answer:

£43.31

Working:

Find the discount amount first.

Discount = 25% of £55.00 = 0.25 × £55.00 = £13.75.

Subtract the discount from the original price.

Reduced price = £55.00 - £13.75 = £41.25.

Find VAT on the reduced price, not on the original price.

VAT = 5% of £41.25 = 0.05 × £41.25 = £2.06.

Final price = £41.25 + £2.06 = £43.31.

S3

Use the given exchange rate to convert currencies.

The exchange rate is £1.00 = EUR 1.18. Convert £60.00 to euros.

Answer:

EUR 70.80

Working:

The rate tells us how many euros are equal to £1.00.

To convert from pounds, multiply by the exchange rate.

£60.00 × 1.18 = EUR 70.80.

NUM-C0D6-L1 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S4

Compare unit prices to decide the better value.

Shop A sells 10 pens for £9.00. Shop B sells 15 pens for £15.60. Which shop is better value?

Answer:

Shop A, saving 14.00p per pen

Working:

Find the unit price for Shop A.

Shop A unit price = £9.00 ÷ 10 = 90.00p per pen.

Find the unit price for Shop B.

Shop B unit price = £15.60 ÷ 15 = £1.04 per pen.

Compare the unit prices: 90.00p is less than £1.04.

Shop A is better value by 14.00p per pen.

EA1

Apply the changes in the order stated in the question.

An item costs £95.00. It is reduced by 20%, then 12% VAT is added to the reduced price. Find the final price.

Answer:

£85.12

Working:

Find the discount amount first.

Discount = 20% of £95.00 = 0.2 × £95.00 = £19.00.

Subtract the discount from the original price.

Reduced price = £95.00 - £19.00 = £76.00.

Find VAT on the reduced price, not on the original price.

$\text{VAT} = 12\% \text{ of } £76.00 = 0.12 \times £76.00 = £9.12.$

Final price = £76.00 + £9.12 = £85.12.

EA2

Use the given exchange rate to convert currencies.

The exchange rate is £1.00 = $1.25. Convert £90.00 to US dollars.

Answer:

$112.50

Working:

The rate tells us how many US dollars are equal to £1.00.

To convert from pounds, multiply by the exchange rate.

$£90.00 \times 1.25 = \$112.50.$

Financial Real-Life Maths · Everyday Money

NUM-C0D6-L1 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

EB1

Compare unit prices to decide the better value.

Shop A sells 10 notebooks for £4.20. Shop B sells 3 notebooks for £1.53. Which shop is better value?

Answer:

Shop A, saving 9.00p per notebook

Working:

Find the unit price for Shop A.

Shop A unit price = £4.20 ÷ 10 = 42.00p per notebook.

Find the unit price for Shop B.

Shop B unit price = £1.53 ÷ 3 = 51.00p per notebook.

Compare the unit prices: 42.00p is less than 51.00p.

Shop A is better value by 9.00p per notebook.
