S1

Track income and outgoings clearly before answering the final question.

A monthly income is £1250.00. Costs are rent £850.00, bills £160.00, food £260.00, and travel £90.00. The person wants to save 15% of their income. How much is left after saving?

S2

Work backwards from the final amount using the correct multiplier.

After a 25% decrease, the price is £108.00. Find the original price.

S3

Calculate the total cost of each option before choosing.

A subscription can be paid in two ways. Option A costs £35.00 per month for 6 months. Option B has a set-up fee of £30.00 and costs £33.00 per month for 6 months. Which option is cheaper?

S4

Track income and outgoings clearly before answering the final question.

A monthly income is £1500.00. Costs are rent £450.00, bills £240.00, food £220.00, and travel £90.00. The person wants to save 20% of their income. How much is left after saving?

S1

Track income and outgoings clearly before answering the final question.

A monthly income is £1250.00. Costs are rent £850.00, bills £160.00, food £260.00, and travel £90.00. The person wants to save 15% of their income. How much is left after saving?

Answer:

£-297.50

Working:

Add the monthly costs.

Total costs = £850.00 + £160.00 + £260.00 + £90.00 = £1360.00.

Find the amount left before saving.

Left before saving = £1250.00 - £1360.00 = £-110.00.

Find the saving target.

Saving target = 15% of £1250.00 = £187.50.

Left after saving = £-110.00 - £187.50 = £-297.50.

S2

Work backwards from the final amount using the correct multiplier.

After a 25% decrease, the price is £108.00. Find the original price.

Answer:

£144.00

Working:

The original price represents 100%.

After a 25% decrease, the final price represents 75%.

Use the multiplier 0.75.

Original price × 0.75 = £108.00.

Original price = £108.00 ÷ 0.75 = £144.00.

S3

Calculate the total cost of each option before choosing.

A subscription can be paid in two ways. Option A costs £35.00 per month for 6 months. Option B has a set-up fee of £30.00 and costs £33.00 per month for 6 months. Which option is cheaper?

Answer:

Option A, saving £18.00

Working:

Calculate the total cost of Option A.

Option A total = 6 × £35.00 = £210.00.

Calculate the total cost of Option B, including the set-up fee.

Option B total = £30.00 + 6 × £33.00 = £228.00.

Compare the totals: £210.00 is less than £228.00.

Option A is cheaper by £18.00.

S4

Track income and outgoings clearly before answering the final question.

A monthly income is £1500.00. Costs are rent £450.00, bills £240.00, food £220.00, and travel £90.00. The person wants to save 20% of their income. How much is left after saving?

Answer:

£200.00

Working:

Add the monthly costs.

Total costs = £450.00 + £240.00 + £220.00 + £90.00 = £1000.00.

Find the amount left before saving.

Left before saving = £1500.00 - £1000.00 = £500.00.

Find the saving target.

Saving target = 20% of £1500.00 = £300.00.

Left after saving = £500.00 - £300.00 = £200.00.

EA1

Work backwards from the final amount using the correct multiplier.

After a 20% decrease, the price is £180.00. Find the original price.

Answer:

£225.00

Working:

The original price represents 100%.

After a 20% decrease, the final price represents 80%.

Use the multiplier 0.8.

Original price × 0.8 = £180.00.

Original price = £180.00 ÷ 0.8 = £225.00.

EA2

Calculate the total cost of each option before choosing.

A subscription can be paid in two ways. Option A costs £18.00 per month for 12 months. Option B has a set-up fee of £50.00 and costs £13.00 per month for 12 months. Which option is cheaper?

Answer:

Option B, saving £10.00

Working:

Calculate the total cost of Option A.

Option A total = 12 × £18.00 = £216.00.

Calculate the total cost of Option B, including the set-up fee.

Option B total = £50.00 + 12 × £13.00 = £206.00.

Compare the totals: £206.00 is less than £216.00.

Option B is cheaper by £10.00.

EB1

Track income and outgoings clearly before answering the final question.

A monthly income is £1500.00. Costs are rent £650.00, bills £160.00, food £180.00, and travel £150.00. The person wants to save 10% of their income. How much is left after saving?

Answer:

£210.00

Working:

Add the monthly costs.

Total costs = £650.00 + £160.00 + £180.00 + £150.00 = £1140.00.

Find the amount left before saving.

Left before saving = £1500.00 - £1140.00 = £360.00.

Find the saving target.

Saving target = 10% of £1500.00 = £150.00.

Left after saving = £360.00 - £150.00 = £210.00.
