Teacher answers & working

Bracket Expansion · Single Bracket Expansion

ALG-3E2E-L1 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S1

$5(x - 6)$

Answer:

$5x - 30$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Distribute to both terms.

$5 \cdot x - 5 \cdot 6$

$5x - 30$

Step 3: Collect any like terms and write the expression in expanded form.

S2

$x(4x - 8)$

Answer:

$4x^2 - 8x$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply x by each term inside the bracket.

$x \cdot 4x - x \cdot 8$

$4x^2 - 8x$

Step 3: Collect any like terms and write the expression in expanded form.

S3

$3(x + 4)$

Answer:

$3x + 12$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Distribute to both terms.

$3 \cdot x + 3 \cdot 4$

$3x + 12$

Step 3: Collect any like terms and write the expression in expanded form.

S4

$2(x + 4)$

Answer:

$2x + 8$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Distribute to both terms.

$2 \cdot x + 2 \cdot 4$

$2x + 8$

Step 3: Collect any like terms and write the expression in expanded form.

E1

$x(5x + 3)$

Answer:

$5x^2 + 3x$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply x by each term inside the bracket.

$x \cdot 5x + x \cdot 3$

$5x^2 + 3x$

Step 3: Collect any like terms and write the expression in expanded form.

E2

$x(5x + 2)$

Answer:

$5x^2 + 2x$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Multiply x by each term inside the bracket.

$x \cdot 5x + x \cdot 2$

$5x^2 + 2x$

Step 3: Collect any like terms and write the expression in expanded form.

E3

$4(x - 6)$

Answer:

$4x - 24$

Working:

Step 1: Identify the expansion method and keep the brackets intact until each multiplication has been shown.

Step 2: Distribute to both terms.

$4 \cdot x - 4 \cdot 6$

$4x - 24$

Step 3: Collect any like terms and write the expression in expanded form.
