Name _____

S1

Calculate normal pay and overtime pay separately, then combine.

A worker is paid £15.00 per hour for 30 normal hours. They work 6 overtime hours paid at 2 times the normal rate. Find the total pay.

S2

Find commission first, then add it to the fixed pay if needed.

A salesperson earns a fixed weekly pay of £300.00 plus 4% commission on sales. They make sales of £1200.00. Find their total earnings.

S3

Distinguish between cost price, selling price, profit, markup, and margin.

A product costs £120.00 to buy. A shop adds a 40% markup before selling it. Find the selling price and the profit margin.

S4

Calculate normal pay and overtime pay separately, then combine.

A worker is paid £12.00 per hour for 28 normal hours. They work 5 overtime hours paid at 2 times the normal rate. Find the total pay.

S1

Calculate normal pay and overtime pay separately, then combine.

A worker is paid £15.00 per hour for 30 normal hours. They work 6 overtime hours paid at 2 times the normal rate. Find the total pay.

Answer:

£630.00

Working:

Find the pay for the normal hours.

Normal pay = 30 × £15.00 = £450.00.

Find the overtime hourly rate.

Overtime rate = 2 × £15.00 = £30.00.

Find the overtime pay.

Overtime pay = 6 × £30.00 = £180.00.

Total pay = £450.00 + £180.00 = £630.00.

S2

Find commission first, then add it to the fixed pay if needed.

A salesperson earns a fixed weekly pay of £300.00 plus 4% commission on sales. They make sales of £1200.00. Find their total earnings.

Answer:

£348.00

Working:

Find the commission first.

Commission = 4% of £1200.00 = 0.04 × £1200.00 = £48.00.

Add the fixed weekly pay.

Total earnings = £300.00 + £48.00 = £348.00.

NUM-C0D6-L2 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

S3

Distinguish between cost price, selling price, profit, markup, and margin.

A product costs £120.00 to buy. A shop adds a 40% markup before selling it. Find the selling price and the profit margin.

Answer:

£168.00, margin 28.57%

Working:

Markup is calculated from the cost price.

Profit = 40% of £120.00 = 0.4 × £120.00 = £48.00.

Selling price = cost price + profit.

Selling price = £120.00 + £48.00 = £168.00.

Profit margin compares profit with selling price.

Profit margin = (£48.00 ÷ £168.00) × 100 = 28.57%.

S4

Calculate normal pay and overtime pay separately, then combine.

A worker is paid £12.00 per hour for 28 normal hours. They work 5 overtime hours paid at 2 times the normal rate. Find the total pay.

Answer:

£456.00

Working:

Find the pay for the normal hours.

Normal pay = 28 × £12.00 = £336.00.

Find the overtime hourly rate.

Overtime rate = 2 × £12.00 = £24.00.

Find the overtime pay.

Overtime pay = 5 × £24.00 = £120.00.

Total pay = £336.00 + £120.00 = £456.00.

NUM-C0D6-L2 · Student pages 1-2. Print at 100%, single-sided. Cut on dashed lines.

EA1

Find commission first, then add it to the fixed pay if needed.

A salesperson earns a fixed weekly pay of £400.00 plus 4% commission on sales. They make sales of £2200.00. Find their total earnings.

Answer:

£488.00

Working:

Find the commission first.

Commission = 4% of £2200.00 = 0.04 × £2200.00 = £88.00.

Add the fixed weekly pay.

Total earnings = £400.00 + £88.00 = £488.00.

EA2

Distinguish between cost price, selling price, profit, markup, and margin.

A product costs £80.00 to buy. A shop adds a 30% markup before selling it. Find the selling price and the profit margin.

Answer:

£104.00, margin 23.08%

Working:

Markup is calculated from the cost price.

Profit = 30% of £80.00 = 0.3 × £80.00 = £24.00.

Selling price = cost price + profit.

Selling price = £80.00 + £24.00 = £104.00.

Profit margin compares profit with selling price.

Profit margin = (£24.00 ÷ £104.00) × 100 = 23.08%.

EB1

Calculate normal pay and overtime pay separately, then combine.

A worker is paid £9.50 per hour for 32 normal hours. They work 4 overtime hours paid at 2 times the normal rate. Find the total pay.

Answer:

£380.00

Working:

Find the pay for the normal hours.

Normal pay = 32 × £9.50 = £304.00.

Find the overtime hourly rate.

Overtime rate = 2 × £9.50 = £19.00.

Find the overtime pay.

Overtime pay = 4 × £19.00 = £76.00.

Total pay = £304.00 + £76.00 = £380.00.
