S1

973,048 ÷ 10,000

Answer:

97.3048

Working:

Step 1: Identify the power of 10

We are dividing by 10,000 = 10^4

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 4 places right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

973,048.0 → digits shift 4 places right → 97.3048

Step 3: Write the final answer

973,048 ÷ 10,000 = 97.3048

S2

561.248 ÷ 100

Answer:

5.61248

Working:

Step 1: Identify the power of 10

We are dividing by 100 = 10^2

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 2 places right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

561.248 → digits shift 2 places right → 5.61248

Step 3: Write the final answer

561.248 ÷ 100 = 5.61248

S3

548,002 ÷ 1,000

Answer:

548.002

Working:

Step 1: Identify the power of 10

We are dividing by 1,000 = 10^3

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 3 places right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

548,002.0 → digits shift 3 places right → 548.002

Step 3: Write the final answer

548,002 ÷ 1,000 = 548.002

S4

234.34 ÷ 10

Answer:

23.434

Working:

Step 1: Identify the power of 10

We are dividing by 10 = 10^1

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 1 place right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

234.34 → digits shift 1 place right → 23.434

Step 3: Write the final answer

234.34 ÷ 10 = 23.434

E1

944,886 ÷ 100

Answer:

9448.86

Working:

Step 1: Identify the power of 10

We are dividing by 100 = 10^2

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 2 places right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

944,886.0 → digits shift 2 places right → 9448.86

Step 3: Write the final answer

944,886 ÷ 100 = 9448.86

E2

24.5665 ÷ 10

Answer:

2.45665

Working:

Step 1: Identify the power of 10

We are dividing by 10 = 10^1

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 1 place right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

24.5665 → digits shift 1 place right → 2.45665

Step 3: Write the final answer

24.5665 ÷ 10 = 2.45665

E3

$190{,}382 \div 10{,}000$

Answer:

19.0382

Working:

Step 1: Identify the power of 10

We are dividing by 10,000 = 10^4

Step 2: Shift the digits through the fixed decimal point

Dividing by a power of 10 shifts the digits 4 places right into smaller place-value columns. The decimal point stays fixed between ones and tenths.

190,382.0 → digits shift 4 places right → 19.0382

Step 3: Write the final answer

$190{,}382 \div 10{,}000 = 19.0382$
